

Nitocote EP410

Highly chemical resistant, solvent free, epoxy coating system, for concrete and steel applications in applications such as sewer and chemical bund areas

USES

To provide protection to concrete and steel structures in aggressive chemical exposure or immersion conditions. The material is particularly suitable for applications in process plants and sewage works.

ADVANTAGES

- Excellent chemical resistance
- Excellent adhesion and film build to SSD concrete and steel
- Excellent abrasion resistance
- Easily applied by roller or airless spray

DESCRIPTION

Nitocote EP410 is a high build, solvent free, two pack epoxy formulation. It is supplied in pre-measured quantities ready for site mixing and use. Nitocote EP410 is grey in colour. White is also available.

TECHNICAL SUPPORT

Parchem offers a comprehensive range of high performance, high quality products. In addition, Parchem offers a technical support service to specifiers, end users and contractors, as well as on-site technical assistance.

DESIGN CRITERIA

Nitocote EP410 is designed to be applied in 2 coats to achieve a minimum total dry film thickness of 300 microns. When necessary, Nitocote EP410 can be used in conjunction with glass fibre reinforcement to bridge fine cracks. In particularly aggressive environments 3 coats at 150 microns to achieve a dft of 450 microns may be required.

PROPERTIES

Volume solids:	100%
Viscosity:	Pourable, spreadable liquid
Pot life:	
@ 20°C	40 minutes
@ 35°C	25 minutes
Cure time	4 - 8 hours - tack free
@ 20°C:	24 hours - initial hardness 7 days - full cure

Minimum application temperature:	10°C
---	------

Typical bond strength:	
- dry concrete:	3 MPa
- SSD concrete:	3 MPa

The fully cured coating

is resistant to:	
Phosphoric acid	25%
Hydrochloric acid	25%
Nitric acid	25%
Sulphuric acid	25%
Tartaric acid	15%
Sodium Hydroxide	25%
Saturated Citric acid	
Petrol	
Kerosene	
Saturated salt	

Your local Parchem sales office should be consulted in respect of other chemicals, or at operating temperatures greater than 50°C.

SPECIFICATION CLAUSES

CHEMICAL AND ABRASION RESISTANT LINING

The chemical and abrasion resistant coating shall be Nitocote EP410, a high build, two pack epoxy system specifically designed to provide a tough and impermeable film.

APPLICATION INSTRUCTIONS

PREPARATION

CONCRETE SURFACES

All surfaces must be dry or surface saturated dry, smooth, sound and free from debris and loose material. Surfaces must be free from contamination such as oil, grease, dust, loose particles and organic growth. Concrete surfaces must be fully cured, laitance-free and free from any traces of shuttering release oils and curing compounds.

All surfaces should then be grit blasted to remove all foreign matter, open up blow holes and provide a suitable key for Nitocote EP410.

All blow holes and imperfections should be filled with Nitomortar BH.

STEEL SURFACES

All surfaces should be grit blasted to meet the requirements of AS1627.4 Class 2.5. The lining work should be programmed so that newly cleaned steel is coated before the reformation of rust or scale.

MIXING

The contents of the base can should be stirred thoroughly to disperse any settlement. The entire contents of the hardener can should be stirred and added to the base container and mixed thoroughly until a uniform colour and consistency are obtained, taking particular care to scrape the sides and bottom of the container.

It is recommended that mechanical mixing be employed using a suitable mixer on a heavy duty, slow speed electric drill. In cold weather, materials should be stored between 15°C - 20°C for 24 hours before use.

APPLICATION

In order to obtain the protective properties of the Nitocote EP410 system, it is important that the correct rates of application and overcoating times are observed.

Number of coats: 2

Theoretical application

rate per coat: 0.15 litres per m²

Theoretical wet film

thickness per coat: 150 microns

Overcoating times:

@ 10°C: 18 - 72 hours

@ 20°C: 8 - 48 hours

@ 30°C: 4 - 24 hours

Fully cured:

@ 10°C: 14 days

@ 20°C: 7 days

@ 30 °C: 6 days

If the coating is exposed to moisture during its cure period (e.g. condensation, dew) it should be mechanically roughened prior to overcoating (e.g. lightly sanded). Failure to provide a suitable mechanical key under these conditions can result in delamination of the overcoat.

The minimum application temperature is 10°C.

All prepared surfaces should be treated with 2 coats of Nitocote EP410. The mixed material should be applied by a roller or airless spray equipment to achieve a uniform coating with a wet film thickness not less than 150 microns per coat. Any movement joints in the structure should be expressed through the coating and sealed with an appropriate sealant.

USE OF GLASS FIBRE REINFORCEMENT

Nitocote EP410 may be used in conjunction with glass fibre cloth where necessary, to bridge fine cracks in the substrate. The cloth should be laid directly on the first coat whilst wet and should be pressed in and smoothed out with a stiff nylon brush or split washer roller. A second coat should then be applied, allowing no more than 48 hours at 20°C and no more than 24 hours at 30°C between coats, and again achieving a wet film thickness not less than 150 microns.

Suitable cloth is open weave 110 g/m² glass cloth.

CLEANING

Nitocote EP410 should be removed from tools and equipment with Solvent 10 immediately after use. Cured material can only be removed mechanically.

LIMITATIONS

Nitocote EP410 is formulated for application to clean, sound concrete and steel. It should not be applied over existing coatings. Application should not be undertaken if the temperature is below 10°C or is 10°C and falling, nor when the prevailing relative humidity (RH) exceeds 90%.

Nitocote EP410 is not colour stable when exposed to direct sunlight, nor when in contact with some chemicals.

ESTIMATING

SUPPLY

Nitocote EP410:	8 litre pack
Solvent 10:	4 and 20 litre pails

COVERAGE

Nitocote EP410:	6.5 m ² per litre per coat (2 coats required)
------------------------	---

The coverage figures are theoretical – due to wastage factors and the variety and nature of possible substrates, practical coverage figures may be substantially reduced.

Coverage figures obtained with the first coat will be heavily influenced by the nature of the substrate and its preparation.

When this product is applied at lower temperatures, coverage figures will be reduced. When estimating, substrate condition and application temperature need to be considered and material allowances made.

STORAGE

SHELF LIFE

All products have a shelf life of 12 months if kept in a dry store between 5°C and 30°C in the original, unopened containers.

STORAGE CONDITIONS

Storage in dry conditions at temperatures between 5°C and 30°C in the original, unopened containers. If stored at high temperatures, the shelf life may be reduced.

ADDITIONAL INFORMATION

Parchem provides a wide range of complementary products which include:

- concrete repair – cementitious and epoxy
- grouts and anchors – cementitious and epoxy
- waterproofing membranes – liquid applied, cementitious and bituminous sheet membranes
- waterstops – pvc and swellable
- joint sealants – building, civil and chemical resistant
- industrial flooring systems – cementitious and epoxy
- architectural coatings
- filler boards – swellable cork, bituminous and backing rod
- ancillary products

For further information on any of the above, please consult with your local Parchem sales office.

IMPORTANT NOTICE

A Material Safety Data Sheet (MSDS) and Technical Data Sheet (TDS) are available from the Parchem website or upon request from the nearest Parchem sales office. Read the MSDS and TDS carefully prior to use as application or performance data may change from time to time. In emergency, contact any Poisons Information Centre (phone 13 11 26 within Australia) or a doctor for advice.

PRODUCT DISCLAIMER

This Technical Data Sheet (TDS) summarises our best knowledge of the product, including how to use and apply the product based on the information available at the time. You should read this TDS carefully and consider the information in the context of how the product will be used, including in conjunction with any other product and the type of surfaces to, and the manner in which, the product will be applied. Our responsibility for products sold is subject to our standard terms and conditions of sale. Parchem does not accept any liability either directly or indirectly for any losses suffered in connection with the use or application of the product whether or not in accordance with any advice, specification, recommendation or information given by it.
